PROFILE

Senior Systems Analyst with 7+ years of experience designing complex information systems, integrations and automation for large enterprises including X5 and Sber. I work across the full spectrum — from understanding business processes and constraints to designing system architecture, APIs, data structures and implementation workflows. I actively apply AI and automation to engineering work itself — using LLM, RAG, Graph RAG and knowledge graphs to accelerate system analysis, code understanding and documentation.

EXPERIENCE

X5 Tech

Oct 2023 — Present

Senior System Analyst · Moscow / Remote

- Initiated and implemented AI tools in development and requirements analysis, changing the delivery flow within the team
- Achieved 30–40% acceleration of "idea → feature implementation" cycle through task preparation optimization
- Designed microservice architecture, worked on SAP integrations, defined internal service interactions and DB structure
- Implemented schema-driven approach: semi-automatically generated JSON Schema from XSD, built universal mechanism for auto-generating screen forms — analysts update schemas independently without developers
- Built monitoring dashboards in Grafana and implemented alert logic for production system health tracking
- Implemented AI Harness — software infrastructure around LLMs for reliable autonomous agent behavior

Extrum

Nov 2022 — Sep 2023

Business / System Analyst · Astana

- Designed internal service architecture, timelines, costs, integration interactions and design with customer and development team
- Formed development team and designer, managed backlog, priorities, timelines and task control

Sber

Dec 2018 — Oct 2022

System Analyst · Moscow

- Developed DSL language based on Python as a due diligence tool in corporate lending
- Built internal analytics service for audit team; collaborated with DS team achieving 90% F-measure for document generation
- Developed and supported LegalTech projects, automated due diligence process (AS IS → TO BE)

KEY PROJECT · AI TRANSFORMATION

Skill-packs / Context Structuring / AI Harness · X5 Tech

Designed and scaled end-to-end AI transformation of delivery processes. Created standardized skill-packs for AI tools, restructured task decomposition workflows, built AI Harness infrastructure — achieving 30–40% faster idea-to-feature cycle and 3× faster incident resolution across multiple teams.

ACHIEVEMENT

RU2732071C1 — Patent for automated legal analysis system (17.06.2022)

IMPACT

30–40%

idea → feature
acceleration

5×

resource optimization

3×

document generation
speed

3×

faster incident
resolution

2×

broker interaction

AI / RESEARCH

Actively exploring AI-powered systems for code analysis, knowledge graphs, semantic search, and AI agent architectures with MCP for automated system analysis and documentation.
