PROFILE

Senior Systems Analyst with 7+ years of experience in designing and delivering enterprise systems, with a strong focus on AI-powered solutions, LLMs, RAG and AI agents. Seeking a Senior Systems Analyst role where I can lead the design of complex systems, integrations, and intelligent automation solutions at scale. I am looking for a position where I can apply my knowledge in new technologies to improve business processes.

EXPERIENCE

X5 Tech

Sep 2025 — Present

Senior System Analyst · Moscow / Remote

- Coordinate delivery across 2 project teams and 1 product team — defining priorities and directing day-to-day work across developers, analysts and QA
- Redesigned the requirements-to-development workflow around AI-assisted specifications, Git-based documentation and automated test generation — reducing idea-to-feature delivery time by 30–40%
- Introduced AI-assisted incident investigation with structured technical context and MCP integrations, reducing production incident resolution from 2–3 days to under 1 day
- Conceived, designed and built AI Code Knowledge Platform — a full-stack system that automatically extracts knowledge from codebases, generates documentation and provides AI chat over system context. Scaled from personal workflow → 5 analysts → multiple teams
- Embedded AI across the delivery pipeline — requirements engineering, documentation, test case creation, API specification review and code analysis — establishing AI as a core delivery tool

X5 Tech

Oct 2023 — Aug 2025

System Analyst · Moscow / Remote

- Designed architecture for a large-scale tax monitoring platform integrating with ~7 external systems (SAP, FNS, signing/EC services), serving 9 legal entities and 40+ users
- Designed a schema-driven approach: XSD → JSON Schema → UI generation pipeline, eliminating developer involvement in supporting new schema versions
- Integrated new data sources for automated report generation, reducing manual workload equivalent to approximately 2 FTE
- Defined API contracts and integration interfaces between SAP, PostgreSQL, ClickHouse and internal services

Extrum

Nov 2022 — Sep 2023

Business / System Analyst · Astana

- Collected requirements, wrote technical specifications and coordinated architecture decisions with customers and development teams
- Managed backlog, priorities and timelines; assembled the development team and directed deliverables

Sber

Dec 2018 — Oct 2022

System Analyst · Moscow

- Co-created an ML-based document generation service achieving 90% F-measure in collaboration with the data science team
- Developed and maintained LegalTech projects automating due diligence processes in corporate lending
- Built an internal analytics service for the audit team; developed Python-based DSL tooling for automated due diligence

EDUCATION

2026

Concepteur Développeur de Solutions Informatiques (RNCP 6)

KEY PROJECT

AI Code Knowledge Platform · X5 Tech

Designed and built a product that automatically extracts knowledge from codebases and generates structured documentation — domain, database, architecture and functional specs. Used by analysts, engineers, support teams, testers and managers for system understanding and onboarding.

AI / RESEARCH

Building AI Code Knowledge Platform. Applying Graph RAG, knowledge graphs, semantic search and AI agents with MCP to accelerate system analysis, code understanding and documentation.
